Communicate online
33 minutes

This learning path will show you how to communicate online effectively using email. You will be introduced to web applications that are used for instant messaging including voice and video calls.

Communicate using email
19 minutes | 8 units

In this module, you will learn more about email, how to set up an email, and how to use it to connect with people

Introduction
1 minute

There are many ways to stay in touch with others using the internet. One of the most popular methods of communicating with others online is using email, or electronic mail.

In this lesson, you will learn how to communicate online using email.

By the end of this lesson you will be able to:

- Describe uses of email.
- Identify options for getting set up with an email account.
- Use an email service to send an email.
- Use an email service to view and reply to messages

Describe uses of email
3 minutes

Intro to email
Email is a web service that allows you to communicate with friends, family, and others online. Email allows you to send and receive mail electronically using the internet.

Watch the following video to learn more about how to use email to communicate online.

Video: Intro to email
With the internet, we can communicate with others in new ways. For example, instead of sending a letter to someone using traditional mail, you can send an email, or electronic mail.
Let's look at how email differs from traditional mail. When you want to send a letter or package, you usually have a few options for which mail carrier you'll use. With email, you also have a variety of providers to choose from, and you can sign up for one of these services for free. One of the most popular email providers is Outlook, but there are several others.

The first thing you'll do when sending an email is compose it. Instead of using a pen and paper to write your message, email providers have composing tools that make it easy for you to write, edit and format your messages using text, images, videos, documents, and more.

Next, you'll need to decide who to send your message to? When we send traditional mail, we need to know the name and physical address of the recipient. With email, every email user signs up for a unique email address. Each email address includes a username, the @ symbol, and the name of the email provider's domain.

For example, someone named Jacob Heyward, who signs up for an email account with Outlook, might use the email address, jacob.heyward@outlook.com. When you know someone's email address, you can type it into the header of your message and send it to the recipient instantly. The message will travel electronically over the networks that make up the internet and will typically arrive at the person's email inbox within minutes, sometimes seconds. This makes email a much faster way to communicate than using traditional mail.

You can receive emails to your online inbox from anyone who has an email account even if they don't use the same provider that you do. You can usually access your email account from any device that has a web browser. You can also install email apps on your desktop and mobile devices so you can send and view email on the go.

When you sign up for an email provider, you'll create a password so others won't be able to access your mail. Email makes it easy for us to communicate online by sending and receiving mail using the internet.

Identify options for getting set up with an email account
3 minutes

Sign up for email
To send and receive emails, you first need to sign up for an email account. Many email providers allow you to create an account for free. Once you sign up, you'll have your own private online mailbox for sending and receiving mail.

To create an email account, you'll need to:

1. Choose a provider, such as Outlook, Gmail, or Yahoo. You can create an account with an email provider for free.
2. **Create an email address**: This is the address other people will use to send mail to you. You choose your own email address as long as it's not taken by someone else. It's usually a good idea to clearly use your name in your email address so that others know who they're communicating with.

3. **Create an account**: You'll be asked for basic personal info. You'll also set up a password so no one else can access your mail.

4. **Sign in**: Your email account is a private mailbox that only you can access. You need to remember your password and sign in when you want to view your inbox or send mail.

These steps are mostly the same no matter which email provider you choose.

**Watch the following video to learn more about how to sign up for an Outlook email account, create your own email address, and log into your email account.**

**Video: Sign up for email**

Outlook is an email service provided by Microsoft. You can sign up for a free Outlook account to start sending and receiving messages on the web.

Let's walk through how to sign up for an Outlook account and create your own email address. To get started with Outlook, you can use the Outlook app on your computer or mobile device as part of the Office package. However, anyone can create an Outlook account for free at Outlook.com. From here, we can select “Create free account” to create an account.

Next, we're asked to create an email address. Your email address must be unique. So, if you choose a username that's already been taken by someone else, you will have to come up with another one. Once you decide on a unique username, select "Next". From here, you’re asked to create a password for your email account. Enter a password that meets the criteria and select "Next." Provide your first and last name for your account and select "Next." Enter the requested info in the form and select "Next." If you don't meet the age requirements, you will be asked for a parent to provide permission for you to create an account. You've now created your own Outlook email account.

Remember your email address so you can share it with others. You'll now be prompted to customize your account with your time zone, a theme, and a signature. If you'd like you, can navigate through these screens and customize your Outlook experience at a later time. When you're all done, you'll be logged into your email account and your inbox will be on the screen.

If you ever need to view your account information or log out of your account, use the Account menu. For instance, if you're using a shared computer to access Outlook.com like at school or at the library, we suggest you log out of Outlook.com before leaving that computer. With your very own email account and email address, you're ready to start sending and receiving emails.
**Try it yourself**
- Now it’s your turn. Complete the following steps to set up your own email account.
- Choose a provider.
- Choose an email address.
- Create an account.

**Getting to know the Outlook interface**

**Email basics**
Once you have created an account with an email provider and you have an email address, you’re ready to communicate using email. You will simply need to log into your account to access your inbox and send and receive emails. You can access your email using your phone or computer as long as you have an internet connection.

No matter which email provider you use, there are many features that most modern email applications have in common. These features may look slightly different depending on which provider you use, but you will use email in the same way in any case.

**Watch the following video to learn about the parts of the Outlook email interface that you can use to view, reply to, and send emails. Although Outlook is used in this video, the interfaces for other email providers will include the same general components.**

**Video: Get to know the Outlook interface**
Let’s review the features of the Outlook mail interface. Your mail interface might look a bit different if you’re using a different email provider or a different version of Outlook, but the features are mostly the same.

The primary part of your email interface is the inbox. This is where you can view all of the messages you’ve received. The messages are usually listed with the name of the sender, the subject of the email message, and the date and time the email was received. You can organize your messages into folders if you’d like.

Those folders will appear in the folders pane besides your message list. There are some folders that are typically included by default, like the drafts folder, for messages you haven’t yet sent. The Sent Items folder for messages you have sent and the Deleted Items folder for messages you’ve deleted.

If you care for a little more organization, you can create new folders for your emails. Simply click on "New Folder" and type in the name that you’d like for your new folder. When you select an email from your inbox, you can view it in the reading pane. From here, you can read a message and open any attachments that were included in that message.
You also have options to reply to a message or forward it to others. If you want to file an email into a folder, you can either drag and drop the email from your inbox into that folder, or select the "Move to" option in the ribbon and select the folder from those options. When you select "New message" at the top left, you are taken to the compose pane where you can write, edit, format, and send an email message.

There are many more features of mail, but these are the primary parts of the interface they help you read, organize, reply to, and send email from your account.

**Compose and send an email**

1 minute

**Compose and send an email**

Sending a message to someone is quick and simple using email. You can write and format your message, include other types of content like videos or images, choose who will receive your message, and send the message instantly.

**Watch the following video to learn more about how to send messages using Outlook.**

*Video: Sending email with Outlook* (Audio Description)

Microsoft Outlook
Create and send email
Select new email
The cursor clicks the New Email icon
In the text box next to the word "To," "Alex Darrow" is typed.
Next to the word "Subject," the words "Status update" are typed.

The email's body: "Hi Alex - Can you check on the status of the Contoso proposal this afternoon? Thanks!" The cursor clicks "Send."

Reply to an email
The cursor clicks on an email.
Select reply.
Response - email's body: Sounds great. thanks for letting me know.
The cursor clicks "Send."

Forward to share with others
the cursor clicks the Forward icon.
Next to the word "To," the name "Nestor Wilke" is typed.
The email's body: "FYI - status update"
The cursor clicks "Send."

Microsoft copyright 2019
A white checkmark appears inside a bright blue circle.

You got it!

Try it yourself
Now it’s your turn! Follow the steps below to send an email to yourself.

1. Log into your email account.
2. Select the option to compose a new message.
3. Input the recipient - enter your own email address.
4. In the subject line, enter "My first email."
5. In the body of the message, type “Thanks for reading my first email message.”
6. Use the editor to change the word "first" to a bold font style.
7. Send the message.

Read and reply to email
4 minutes

Read and reply to email
Any emails you receive from others will be displayed in your inbox. From your inbox, you can select a message to open and read. You may then choose to reply to the person who sent you the message, forward the message to someone else, delete the message, and more.

Watch the following video to learn how to read and reply to messages using Outlook.

Video: View and reply to email with Outlook
Outlook contains some different options for handling email responses. We’ll go over each one, so you’ll know which one to pick that meets your needs. Here's an email that I’m looking at in the preview pane on the right-hand side. If I want to directly reply to this email, I can select "Reply" from the top of the email itself or reply from the ribbon toolbar. I'll click "Reply," and I'll send an email to Leslie.

You'll notice that the attachments that had been included in this message to start with are stripped out. This is because if I'm sending a reply back to Leslie, we can assume that since she was the one that sent me the attachments in the first place that she already has them and doesn’t need them again. To save space, Outlook will remove the attachments.

I'll click "Send," and off my message goes. Instantly, the icon in the folder list changes to an envelope with the purple arrow pointing to the left, meaning I've replied to it.

Microsoft copyright 2019
Let's click on this email right here. This one also contains an attachment. Leslie only sent this one to me, and I think Jonathan would be interested in it, so I'll click "Forward." Now that I'm forwarding this to somebody else, a few things have happened. Outlook has kept the attachment in the email, assuming that whoever I'm sending it to would also like to get the attachment.

I'll address this one to Jonathan, and I can change the subject. I can do this in a regular reply also if I wanted to. I can add any new information, and Outlook automatically appends the words "FW" for forward at the beginning of the email. I can keep this or remove this. It's up to you.

I can also add my own comments in addition to what Leslie has said. I could remove any header information from this email. In fact, it's a good idea if I'm forwarding something along that contain somebody's sensitive data, such as email information, or a signature file. I'll click and drag to highlight the text and I'll hit "Delete". I don't have to delete this. I could leave it in so Jonathan can see who sent it and the original time it came in. It's completely up to me.

I'll click "Send," and my forward has been sent. Now, the icon changes to an envelope with a blue arrow pointing to the right, meaning, it's been forwarded. There's one more choice I have.

Here's another email that's been sent to me, Jonathan, and Chong. I can reply to everybody that's involved in this email, not just the original sender who, in this case, happens to be Leslie. I can click "Reply All." This is going to create a new email that's addressed to everybody that was in the email. It's important to note that "Reply All" will indeed send an email out to everybody that's involved in an email.

So, if there's a long list of names in there, be careful about what you say because everybody is going to get a copy, and you should also think about whether it's really necessary for everybody to get a copy of what you're sending. Would you be better off only replying to the original sender? I'll click the "Send" button to send this one off, and the icon changes to that of a normal reply. That is how you maintain all your correspondence in Microsoft Outlook.

Knowledge check
4 minutes

1. When you sign up for an email account, which of the following will you create?
   - An email address - Correct! You create your email address, which is a unique address.
   - An email number
2. Which of the following parts of the email interface do you use to view the contents of a message you have received in Outlook?
   - Inbox
   - Reading pane - Correct! The reading pane is where a message is displayed.
   - Drafts
   - Compose pane

3. You can use email to send:
   - Text
   - Photos
   - Videos
   - All of the above - Correct! You can use email to send text, photos, videos, and many types of content.

4. You receive a message from your manager about a project. A new person joins your team and you need to share the project details with them. Which of the following actions should you use to share the email with your new coworker without also sending the message to your manager?
   - Reply to the email and add your new coworker as a recipient.
   - Forward the email to your new coworker. - Correct! This action will send the email to your coworker only.
   - Reply to the email and bcc your new coworker.
   - Reply all to the email.

Summary
1 minute

Congratulations!
You have completed the Communicate using email module and now can answer the following questions on your own:

1. When is it appropriate to send an email?
2. How can you get started with using email?
In this module, you will learn how to communicate with people using instant messaging, voice calls, and video calls.

Introduction

1 minute

The internet and the web make it possible for us to stay in touch with others near and far. There are apps and services that make it easy to communicate with others online through instant messaging (IM), voice calling, and video calling.

In this lesson, we'll explore these methods of communicating online.

By the end of this lesson you will be able to:

- Describe common ways to communicate with others online.
- Use Skype or similar services to send instant messages to others.
- Make voice calls on the web.
- Make video calls on the web.

Describe common ways to communicate with others online

2 minutes

Intro to instant messaging, voice calling, and video calling

There are many ways to stay in touch with friends, family, and others online. You'll likely use different tools in different situations. For example, email is usually used in professional or formal scenarios, such as with a business client or with your professor.

There are other useful tools. Instant messaging (IM) is a way to chat with someone in real time, as if you’re in a live conversation. Online voice calling (VOIP) allows you to make calls to other online users or phone numbers, all without using a landline or cellular network. With video calling, you can use a web camera to see the person you’re talking to on the screen.

Watch the following video to learn more about IM, voice calling, and video calling.

Video: Intro to IM, voice calling, and video calling

There are many ways to stay in touch, friends, family, and others online, whether they’re near or far.

When you want to send a quick direct message to someone and you expect an immediate response, you can send an instant message or IM just like with mobile text messages. IMs allow quick conversations online.
When you want to have a voice conversation with someone without using a cellular network or landline, you can make a voice call using the internet. You can call someone using their phone number or other contact info directly from your computer. You can even make video calls; you can see someone while you talk to them with the use of the cameras on your devices. You can even call multiple people at once, no matter where they are.

There are many services that make this type of communication possible. Social media apps, email providers, and other services often provide a way to send IMs and start voice and video calls from your computer. Skype is a popular Web service that includes instant messaging, voice calling, video calling, and many other useful features. You can install it for free across different devices or access it on the web using a browser.

With so many ways to communicate online, staying in touch with others is only a click away.

**Sign in and out of Skype**

2 minutes

**Sign in and out**

To use Skype, you must first log into your account. Skype for Business is available to Office 365 users with business, school, and work accounts. For personal use, you can use the Skype app, which is available for free through Office. Skype can also be used online.

Throughout this lesson, we will use the Skype for Business app in demonstrations, but you can use Skype in similar ways to send instant messages and conduct voice and video calls online.

**Watch the following video to learn how to sign in and out of Skype for Business.**

**Video: Sign in and out of Skype**

Sign in and out of Skype for Business to choose how you want to be visible to your contacts. If it's your first time signing in, type in your work or school email address. Click the "Sign In" button and you'll see a "Password" box appear. Type in your password here and make sure the "Save my password" box is checked. This will auto save your sign in info for next time. If you don't want to be automatically signed in, leave this box unchecked. Click the "Sign In" button again, and you're in. Now, you can interact with your colleagues or select your present status.

When you're done using Skype for Business, you can sign out or close the app, depending on how you want to be visible online. To sign out, click the "Show Menu" arrow, select "File" and choose "Sign Out." Your session has ended, and others can't see your status or chat with you.

If you want to keep your session running, but hide the app, close your Skype for Business window, just click the X in the upper right corner. Don't worry, you can still receive notifications, IM others and share your status.
Bring the main window back up at any time by searching for Skype for Business on your computer or click the app icon if you’ve pinned it to your task bar. By signing in and out of Skype for Business, you can choose when and how you want to interact with others at your convenience.

Add contacts in Skype
1 minute

Add contacts
You can’t really communicate online without having people to communicate with. After setting up your Skype account, add contacts to connect with people you’ll talk to online.

Watch the following video to learn how to add a contact in Skype for Business.

Video: Add contacts in Skype for Business
You can add a contact in Skype for Business. Here's how. In the search bar, start typing their name. Then just right-click their listing, choose “Add to Contacts List” and add them to one of your groups.

If the person you're searching for is not in your organization, but you know they have a Skype account, click the "Skype Directory" tab. Knowing their Skype username and location helps narrow the search quickly. For more about Skype for Business, visit aka.ms/meetSfB.

Set up audio and video in Skype
2 minutes

Set up audio and video
Before you start using Skype or Skype for Business to make calls, you should make sure your audio and video are set up properly so others can hear or see you.

Watch the following video to learn how to set up audio and video in Skype for Business.

Video: Set up audio and video
Before you use Skype for Business for audio and video calls, it's a good idea to make sure your speakers, camera, and headset are set up the way you want. Start by clicking this button down at the bottom to open the Devices menu. Then click "Audio Device Settings." Select the device you want to use for your meetings. Then click the green play button to test the speaker. Use the slider to adjust the volume. If you don’t hear anything, make sure your speakers are turned on and are not muted.

Now start speaking and adjust your microphone’s volume as well. I'll put mine in the mid-range here, testing, testing, testing. Next, check your camera. Select "Video Device." Pick your camera and
from the list. Click "Camera Settings" if you need to adjust lighting or color. When you’re done, click "OK." Now, let’s make a video call.>> Hey, Ken, what’s up?>> Smile, we’re making a video.>> Okay, then.>> To learn more about Skype for Business, visit aka.ms/meetSfB.

Change status and send instant messages on Skype

2 minutes

Chat basics

Staying in touch with others is quick and easy with communication services like Skype and Skype for Business. With these types of services, you can usually check your contacts’ status or presence indicators to know if they are online or away. When someone is online, you can quickly send an instant message or IM and have an interactive online conversation.

Video: Chat basics

With Skype for Business, you can keep track of your coworkers through presence indicators. The three most common are green, red, and yellow, which mean available, busy, and away. Skype for Business changes these indicators based on your activity and Outlook schedule.

Because Tony’s available, I’ll send him an instant message. When I hover over his picture, these buttons appear. I’ll click the first one to start the IM. You can often see more information over here next to their name. It looks like Alex is in a conference call and Katy’s out all day.

Two other indicators are "Do Not Disturb" and "Offline. "Skype for Business automatically sets your presence to "Do Not Disturb" when you’re presenting, so that your presentation won’t be interrupted by an IM or a phone call.

If you sign out of Skype for Business, you’ll appear as "Offline." One more thing, you can set your presence manually by clicking this arrow next to your picture. This is helpful when you’re busy, want to appear away or don’t want to be disturbed. For more about Skype for Business, visit aka.ms/meetSfB.

Make a call on Skype

2 minutes

Make a call

You can use online communication services like Skype and Skype for Business to make voice and video calls using the internet. Skype allows you to call someone using their phone number or using their contact profile in the Skype directory.

Watch the following video to learn how to make a call using Skype for Business.
Video: Make a call
You can call anyone, even personal contacts, right from your device using Skype for Business. Type any number in the search bar here. Better yet, type a contact name from your company directory, or use keywords like a department name.

You can even search the entire Skype directory. Then, just hover over the picture and click the phone button to call. >> Hi, Robin. >> Hi, Jerry. I’m making a video and want to show a few things. >> Sure, I’m all yours. >> If I’m calling another Skype for Business user, I can use these buttons to start a video chat, present my screen, or mute my mic.

If you need to use the dial pad to enter a number during a call, you can find it here. The call controls give me more options, including transferring a call or adjusting the volume. I can also switch from the computer speaker to my headset, right in the middle of a call. Thanks, Jerry. >> My pleasure. >>

In other Office applications such as Word, you can make a call by just pointing to a person’s name and clicking the icon. For more about Skype for Business, visit aka.ms/meetSfB.

Knowledge check
1 minute

1. You can use Skype to:
   - Make a voice call to someone without knowing their phone number.
   - Have a video call with someone in another location.
   - Chat with someone using instant messaging.
   - All of the above. - Correct! Skype features include voice calls, video calls, and instant messaging.
