There's only one thing you need to understand about how a coronavirus spreads.

1. Keep your distance. 2m to 0.5m will keep you safe from large droplets.
2. Give them a mask. They can cough/sneeze into it and protect everyone else nearby.
3. And if you touch any of these things by accident, and then touch your face, you might all fall sick.

And in general, it's a good idea to avoid crowds, because you don't know who might be sick.

People who are infected can show no symptoms, but are still infectious.

Maybe she's not sick, just protecting herself.

Viruses can last for up to 24 hours on objects.

And the only effective way to get rid of them is to wash them off with soap.
Which is why it is also good to follow these 5 precautions:

1. Do not touch your face (or anyone else's face.) If you have to, wash your hands with soap thoroughly first.

2. Throw away masks once they feel gross, don't wear them for more than a day!

3. Do not share food, utensils, cups, towels.

4. Open and close doors with your elbows or shoulders instead of hands, if possible.

5. Always wash your hands with soap...
   - Before you eat
   - And after being out in the public

And finally, stay safe, everyone!
